#### PREFACE

The Alberta Statistical Review provides users with a comprehensive look at Alberta's economy and people in the form of statistical tables, charts and analysis. Although the emphasis is primarily on Alberta, many of the tables present information for Canada and the other provinces. Monthly and quarterly data are given for the latest two years and for a historical perspective, five years of annual data are presented.

Following the Alberta Census Division map is a summary table of current economic indicators for Canada and selected provinces. The 82 statistical tables are distributed among fourteen sections:

Population Finance Labour Force Energy

Income Manufacturing
Prices Construction
Gross Domestic Product Agriculture
Investment Retail Sales

International Trade Travel

The statistics have been compiled from a variety of sources including Statistics Canada, federal and provincial government departments and the Alberta Bureau of Statistics. Sources of data are included with each table to assist users in obtaining more detailed data and additional information regarding definitions and concepts.

Note: % Change refers to the percent change from the same reference period a year ago.

<sup>(1)</sup> Seasonally Adjusted (2) Urban Centres of Population 10,000 and Over

- Alberta's population as of January 1, 1992 was 2,549,500, up 1.9% from last January. B.C. was the only province to experience a higher rate of growth at 2.5%.
- In 1990 and 1991, Alberta's net migration was 21,800 and 18,520, respectively, the highest levels since 1981. The lower level in 1991 was attributable to a smaller net inflow of migrants from other provinces, most notably from Saskatchewan and Ontario. Net international migration also declined.

Source: Alberta Bureau of Statistics, "Population Projections, Alberta, 1987-2016"

Note: Data refers to June 1 of reference year.

The projections are based on a combination of assumptions related to natural increase and net migration. All of the projection series have the same mortality assumption. Series 1 uses low fertility and low migration assumptions, Series 5 uses medium fertility and medium migration assumptions, and Series 9 uses high fertility and high migration assumptions.

See the source publication for further information.

- Compared to the previous month, all provinces reported job losses in April, 1992. Total employment (seasonally adjusted) in Canada decreased 57,000 with declines concentrated in service producing industries and fulltime positions.
- For the first time since the beginning of 1986, Alberta recorded three consecutive monthly declines in employment. Following losses in February and March, jobs decreased 1,000 in April to 1,236,000. During this three-month period, the labour force declined 14,000 and unemployment fell by 10,000. Consequently, after remaining at 9.6% in February and March, the unemployment rate (seasonally adjusted) decreased to 9.0%, the first decline in seven months. Only Saskatchewan reported a lower rate at 7.9%. Canada's rate fell slightly from 11.1% to 11.0% in April.

- From December, 1991 to February, 1992, monthly year-over-year increases in average weekly earnings for Alberta were more than double comparable increases in price changes as measured by the Consumer Price Index (CPI). In February, wages rose 4.8%, while the CPI rose 2.3%. The remaining provinces posted wage gains ranging from 2.0% in New Brunswick to 7.1% in B.C. P.E.I. recorded the only decrease at 1.5%. Canada's increase was 4.5%, the smallest gain since May, 1989.
- Compared to a year ago, wages for February, 1992 were up in all Alberta industries except construction which declined by 8.9%. Workers in the forestry industry received the largest increase at 12.8% while the smallest gain of 2.2% was reported by trade industries.

<sup>\*\*</sup> MORE INFORMATION IS AVAILABLE IN ASIST MATRIX 1301 \*\*

- For the third consecutive month, year-over-year increases in Alberta's Consumer Price Index (CPI) registered just over 2.0%. In April, 1992, Alberta's increase of 2.1% was surpassed only by B.C. at 2.7% while the smallest increase in Canada was posted in Saskatchewan at 0.4%.
- During the first four months of 1992, year-over-year increases in Canada's CPI showed little movement at either 1.6% or 1.7%. It has been about thirty years since a period of rates this low was last observed.
- The largest increases among the major surveyed cities for April, 1992 were posted in Vancouver (2.8%), Thunder Bay (2.3%), Calgary (2.2%) and Edmonton (2.1%). Regina and Saskatoon recorded the only decreases at -0.3% and -0.5%, respectively.

Sub-Total	14,327,025	91.7
Other Commodities	1,295,318	8.3
Total Exports	15,622,343	100.0

Source: Statistics Canada, External Trade Division

Note: Commodity data presented in this table are based on the Harmonized Commodity Description and Coding System (Harmonized System or H.S.), an international commodity classification. Canada adopted this system in 1988 to replace the Customs Tariff Schedule, as well as the Canadian International Trade Classification (CITC) and the Export Commodity Classification (XCC). The Harmonized System is based on a fundamental principle – that goods are classified by what they are and not according to their stage of fabrication use, made in Canada status or any other such criteria.

Refer to Statistics Canada Catalogue No. 12-578E, "Canadian Export Classification" for more information.

	Value (p) (Thousands of Dollars)	Percent of Total

<sup>(2)</sup> Excludes Electrical Machinery.

<sup>\*\*</sup> MORE INFORMATION IS AVAILABLE THROUGH ASIST IN CANSIM MATRIX 9578 \*\*

- Compared to 1990, the value of new construction in 1991 decreased in seven provinces. The greatest declines were in Ontario (11.2%), Alberta (9.9%) and Manitoba (8.1%). Alberta's decrease was due to lower activity in the majority of sectors with the largest declines in commercial and industrial building projects. Spending for gas and oil facilities dropped 1.9%.
- Alberta new construction expenditures for 1992 are expected to decrease 1.8% to \$10.6 billion mainly attributable to declines in engineering projects: 3.2% in waterworks and sewage systems, 5.1% in roadways and highways and 10.0% in gas and oil facilities. Partially offsetting these decreases is an anticipated increase in new building construction led by gains in residential (11.4%) and institutional (19.4%) sectors.

- In March, 1992, all provinces except Newfoundland, Ontario and Manitoba reported higher retail sales (seasonally adjusted) compared to the previous month. Gains ranged from 0.2% in Quebec to 4.5% in Nova Scotia. During the period from November, 1991 to March, 1992, consumer spending in Alberta grew in all months except February. Sales reached \$1.61 billion in March, up 1.3%. Canada experienced a weak trend in sales since December, 1991 as spending either declined or showed no growth at all. Alberta recorded the highest per capita sales in March at \$589 followed by B.C. at \$569. Canadians spent an average of \$512.
- Compared to the same period in 1991, cumulative sales for January to March were up 2.3% in Alberta and Manitoba, the second largest gains in Canada following P.E.I. at 4.6%. Alberta posted notable increases in supermarkets and grocery stores, other household furnishings stores and drug and patent medicine stores.

Note: Entries are the number of people entering the park for any reason.

<sup>(1) 1991</sup> data are not directly comparable to prior years data due to a change in the data recording system.

# **DEFINITIONS**

### DEFINITIONS

### ASIST

ASIST (Alberta Statistical Information System) is a publicly accessible on-line information system for the retrieval, manipulation and dissemination of socio-economic data. ASIST has been developed in response to an ever-increasing need for a single source of timely and reliable information which is readily accessible to government departments and agencies, businesses and the general public.

ASIST contains current and historical statistical information on a wide range of subjects including population, energy, trade and commerce, prices, manufacturing, finance and construction. In general, this statistical information focuses on Alberta and its various geographical areas. The Alberta Bureau of Statistics is solely responsible for co-ordinating the entry, maintenance and updating of all data within ASIST. Where applicable, ASIST matrix numbers have been provided at the bottom of the tables. As well, many of the other statistical series presented in this publication are available on the CANSIM Mini-Base and can be retrieved through ASIST.

# **Average Weekly Earnings**

Average weekly earnings represent gross pay before deductions for taxes, unemployment insurance contributions, etc. This includes salaries, straight-time wages, piece-work and regular commission earnings, regular paid incentives, cost of living and other bonuses, payments to persons absent with pay in the survey reference week and overtime earnings (all pay received for the number of hours worked in excess of the standard workday or workweek). The payroll concept does not include supplementary labour costs.

All employees include salaried employees, employees paid by the hour and those employees whose basic remuneration is in the form of commission, piece rates, mileage allowances, etc.

Beginning January, 1987, changes to the survey were implemented involving the survey sampling frame. For further information, consult the May, 1987 issue of Statistics Canada Catalogue No. 72-002, "Employment, Earnings and Hours."

# **Bank Rate**

The Bank Rate is the minimum rate at which the Bank of Canada makes short-term advances to the chartered banks or to savings banks governed by the Quebec Savings Bank Act and after 1-Dec-80, to all members of the Canadian Payments Association.

### **Building Permits**

Residential Building Permits - Number of Dwelling Units Created

1. Single

Refers to structures containing only one dwelling unit completely separated from any other dwelling or structure.

2. Cottages

Refers to seasonal dwellings such as summer homes and house-boats.

3. Double

Refers to dwellings found in structures containing two dwelling units such as duplexes and semidetached dwellings.

4. Row

Refers to one-family dwellings in a structure of three or more attached dwellings.

5. Apartments

Refers to all multiple housing with three or more units such as triplexes, quadruplexes, row duplexes as well as apartments proper. Flats which are part of a non-residential structure are also included.

6. Conversions

Refers to dwelling units added by conversion of existing structures.

Residential Building Permits - Value

Value of building permits issued for residential construction including residential garages, swimming pools, alterations and improvements.

Non-Residential Building Permits - Value

Value of building permits issued for new construction, alterations and improvements for industrial, commercial, institutional and government construction.

1. Industrial Building Permits

Includes buildings used for manufacturing and processing; transportation, communication and other utilities; agriculture; forestry; and mine and mine mill buildings.

2. Commercial Building Permits

Includes stores, warehouses, garages, office buildings, theatres, hotels, funeral parlours, beauty salons and miscellaneous commercial (signs, posters, heating and plumbing installations, etc.).

3. Institutional and Government Building Permits

Includes expenditures made by the community, public and government for buildings and structures - schools, universities, hospitals, clinics, churches, homes for the aged, blind, deaf and dumb, government office and administration buildings, law enforcement, etc.

#### **CANSIM**

CANSIM is the name given to Statistics Canada's computerized data base. It is often termed a general purpose data bank offering a detailed and conceptually compatible set of aggregate data pertaining to a large number of interrelated fields. CANSIM contains over 60,000 timeseries of socio-economic information. An example of a timeseries would be monthly retail sales for Alberta.

Most of the information contained in this publication is available on CANSIM. For your convenience we have provided CANSIM matrix numbers at the bottom of applicable tables.

# Census Division (CD)

According to 1981 Census boundaries, Alberta is divided into fifteen census divisions. However, as a result of 1986 Census boundary changes, the total number of divisions has increased to nineteen. CD 8 split into CD's 8 and 9; CD 12 split into CD's 12 and 16; and CD 15 split into CD's 17, 18 and 19 (see 1986 Census map at the front of the publication).

### Census Metropolitan Area (CMA)

A CMA refers to the main labour market area of an urbanized core of at least 100,000 population, based on the previous census. The urbanized core, together with adjacent urban and rural areas, have a high degree of economic and social integration. CMA's are comprised of one or more Census Subdivisions (CSD's) which meet at least one of the following criteria:

- 1. the CSD falls completely or partly inside the urbanized core;
- 2. at least 50% of the employed labour force living in the CSD works in the urbanized core; or
- 3. at least 25% of the employed labour force working in the CSD lives in the urbanized core.

There are two CMA's in Alberta: Edmonton and Calgary.

In the 1981 Census, the Edmonton CMA included Bon Accord, Edmonton City, Fort Saskatchewan, Gibbons, Legal, Morinville, Redwater, St. Albert, Strathcona County No. 20 and Sturgeon Municipal District No. 90. In the 1986 Census, boundary changes were made resulting in the expansion of the CMA to include Leduc County No. 25 and Parkland County No. 31 with their respective component CSD's.

The Calgary CMA consisted of only Calgary City in 1981. In 1986, the CMA boundary increased to include Rocky View Municipal District No. 44 and its component CSD's, i.e. Airdrie, Beiseker, Cochrane, Crossfield and Irricana.

# Consumer Price Index (CPI) (Refer to Appendix 3 for additional information)

The Consumer Price Index is a price index which measures the percentage change through time of a constant quantity and quality of goods and services purchased by a representative Canadian urban family in a specified time period. The CPI for each city measures price changes from one time period to another within that specific city. Thus, while city CPI's show the movement of prices in each city, they do not indicate price level differences between cities, or between cities and Canada. The CPI is not a measure of true inflationary-deflationary trends; the inference of using the CPI as a measure of true inflation or deflation is incorrect. The CPI only measures percentage changes of a "basket" of commodities - not all items which contribute to inflation or deflation are included.

The city CPI's are compiled using updated weights obtained from the 1986 Family Expenditure Survey which outlines patterns of urban consumer spending behavior.

CPI's for the provinces are available beginning with the September, 1978 reference period. The provincial CPI's may serve as good tools for users who would prefer a regional measure rather than the Canada CPI, but find the city CPI's too narrowly based for their purposes. For provinces which have more than one published city CPI, some users have chosen to combine the published city CPI's to form their own "provincial" index. The new indexes provide for even greater coverage by also using some unpublished data in most provinces.

Statistics Canada publishes CPI's for 16 cities selected from within the ten provinces, with at least one of these cities in each province. The remaining urban centres for which indexes are not published are grouped into strata by city size and location. In Alberta, for example, CPI's are published for Edmonton and Calgary (each treated as an independent stratum), while Lethbridge, Medicine Hat, Red Deer and Fort McMurray are grouped as a single stratum. The weights of the provincial CPI for Alberta will therefore be the sum of the weights for the three strata.

The weights used relate to consumer expenditure patterns in 1986. Distinct expenditure patterns are separately estimated for each urban centre stratum. The total expenditure on each commodity for all strata in the province are summed to derive the provincial expenditure pattern.

# Alberta Expenditure Weights by Major Component:

Food	17.44%
Housing	40.68%
Clothing	8.44%
Transportation	15.46%
Health and Personal Care	3.72%
Recreation, Reading and Education	9.19%
Tobacco Products and Alcoholic Beverages	5.07%
All-Items	100.00%

Refer to Statistics Canada Catalogue No. 62-010, "Consumer Prices and Price Indexes" for more information regarding provincial CPI's.

The CPI percent change is calculated by first subtracting the current period index from the previous period index and then dividing this index point difference by the previous period index and finally multiplying the result by one hundred.

### Conventional Mortgage Rate

The conventional mortgage rate is the rate charged by chartered banks on either 1 year or 5 year mortgages.

#### **Dwelling Completion**

Dwelling completion is the stage at which all the proposed construction work on a dwelling unit has been performed.

#### **Dwelling Start**

A dwelling start is recorded when the footing has been installed, that is, when the concrete has been poured for the whole of the footing around the structure.

**Dwelling Units** 

Please note, the following definitions are applicable only to data from the Survey of Starts and Completions.

1. Single Detached

This is commonly called a "single house." It contains only one dwelling unit which is completely separated on all sides from any other dwelling or structure.

2. Semi-Detached

This category includes each one of two dwellings separated by a common wall extending from ground to roof, or by a garage.

3. Row

This comprises only single attached houses in a row of three or more dwellings. Row-duplexes are not included in this category.

4. Apartment and Other

This category includes dwelling units such as:

- duplexes
- double duplexes
- triplexes
- row-duplexes
- apartments as commonly known
- dwellings over, or at the back of, a store or other non-residential structure.

# **Employed**

The employed labour force includes all persons who during the reference week:

- 1. did any work at all
- 2. had a job but were not at work due to:
  - own illness or disability
  - personal or family responsibilities
  - bad weather
  - labour dispute
  - vacation
  - other reason not specified above.

### **Employment/Population Ratio**

The employment/population ratio represents the number of persons employed expressed as a percentage of the population 15 years of age and over. The employment/population ratio for a particular group (age, sex, marital status, etc.) is the number employed in that group expressed as a percentage of the population for that group.

Farm Cash Receipts

Farm cash receipts include the cash returns from the sale of all agricultural products except those associated with direct inter-farm intraprovincial transfers. Other components included are Wheat Board payments, cash advances on farm-stored crops, deferred grain receipts in Western Canada, Agriculture Stabilization Act deficiency payments, Western Grain Stabilization Act payments and provincial income stabilization payments.

# Farm Debt Outstanding

Farm debt is estimated using a calendar year-end debt outstanding figure. For institutions operating on a fiscal year ending 31-Mar, the debt outstanding at that year-end is used to represent the debt at 31-Dec of the previous year. Excluded from these figures are loans to farmers for non-farm business purposes and for personal use (household purposes). In the case of loans for automobiles, an arbitrary one half of the value of debt outstanding was included as a farm loan. Also excluded were amounts outstanding due to late payment of property tax and income tax.

Farm Operating Expenses and Depreciation Charges

These estimates include farm business costs incurred by farmers regardless of whether they are paid for in cash or accumulated as new debt. As far as possible, they exclude outlays for goods and services obtained directly from other farmers. All direct subsidy payments are taken into account in order that the estimates represent only net amounts paid by farmers.

Depreciation charges are intended to approximate the replacement cost of the value of farm buildings and machinery used up in the year. Building depreciation estimates are for depreciation on farm buildings including the farm business share of houses on owner-occupied farms. Depreciation is calculated using a straight line rate of 35 percent and an expected building life of 28.5 years.

### **Gross Domestic Product at Factor Cost**

Gross Domestic Product (GDP) at Factor Cost is a measure of income accruing to the factors of production (land, labour and capital). It does not include income that accrues to the non-factor or invisible components of GDP (see GDP at Market Prices). Thus GDP at Factor Cost is derived from GDP at Market Prices by subtracting Indirect Taxes less Subsidies, plus Residual.

#### **Gross Domestic Product at Market Prices**

Gross Domestic Product (GDP) at Market Prices refers to the total value of production within a given geographical area for a specific time period, and is measured in prices which prevail during the period being valued. Total production measures are based upon the earnings of the factors of production (Factor Cost) plus the non-factor costs of production (Indirect Taxes less Subsidies). GDP at Market Prices also includes an indirect measure of depreciation called Capital Consumption Allowances. Since this is a measure of production, it does not include transfer payments.

#### Gross Domestic Product at 1986 Prices

Gross Domestic Product (GDP) at 1986 Prices is a measure of total production during a given time frame and a given geographical location which is valued in prices for some base year. For Alberta, the base year used is 1986.

# International Trade (Refer to Appendix 1 for additional information)

International trade statistics are compiled from administrative records filed with Customs. When goods are imported into or exported from Canada, declarations must be filed with Customs, giving such information as description and value of the goods, origin and port of clearance of commodities, and mode of transport.

<u>Domestic Exports</u> - include goods grown, extracted or manufactured in Alberta (including goods of foreign origin which have been materially transformed in Alberta). Exports to overseas countries are valued at F.O.B. (Free on Board) port of exit, including domestic freight charges to that point but net of discounts and allowances. As of January, 1990, exports to the U.S. are valued F.O.B. point of exit from Canada. Prior to 1990, they were valued F.O.B. place of lading net of freight charges, discounts and allowances.

Imports - import data by province of clearance indicates the province in which the goods were cleared by Customs either for immediate consumption or for entry into a bonded Customs warehouse. This may not always coincide with the province in which the goods are consumed or enter the productive process. Imports are valued F.O.B., place of direct shipment to Canada. It excludes freight and insurance costs in bringing the goods to Canada from the point of direct shipment.

### Labour Force

The labour force is composed of that portion of the civilian non-institutional population fifteen years of age and over who, during the reference week were either employed or unemployed.

### Labour Income

Labour income, comprising wages and salaries and supplementary labour income, is defined as all compensation paid to employees residing in Canada. Supplementary labour income, which is defined as payments made by employers for the future benefit of their employees, comprises employers' contributions to employee welfare and pension funds, workmen's compensation funds and unemployment insurance.

### Migration

Migration is defined as a permanent change of residence from one geographical unit to another.

# **Net Migration**

Net migration is the difference between in-migration and out-migration for a geographical unit.

# New Housing Price Index (Refer to Appendix 3 for additional information)

The new housing price index measures changes in selling prices of new houses constructed by large and medium volume builders in metropolitan areas. The houses sampled are representative of the total being sold at that time but adjustments are made for changes in physical characteristics to arrive at pure price change. Prices used are the selling prices agreed upon between builder and buyer at the time of signing the contract. Prices relate to mid-month. The total index includes the house and the serviced lot on which it stands.

# Newly Completed and Unoccupied Dwellings

Newly completed unoccupied dwellings are those which are not sold or rented at the time the dwellings are reported as completed in the Survey of Starts and Completions. The units are surveyed every month until they are sold or rented.

### **Participation Rate**

The participation rate represents the labour force as a percentage of the population fifteen years of age and over. The participation rate for a particular group (age, sex, marital status, etc.) is the labour force in that group expressed as a percentage of the population for that group.

# Personal Disposable Income

Personal Disposable Income consists of total personal income less personal direct taxes and other current transfers to government from persons.

#### **Personal Income**

Personal Income includes all forms of income received by persons and unincorporated businesses:

- 1. wages, salaries and supplementary labour income
- 2. military pay and allowances
- 3. net income of non-farm businesses including rent
- 4. net income of farm operators from farm production
- 5. interest, dividends and miscellaneous investment income
- 6. transfer payment income from government, corporations and non-residents.

#### **Prime Rate**

The Chartered Banks' Rate on Prime Business Loans is the rate charged to the most credit-worthy borrowers. When there are differences in the rate charged by individual banks, the most typical rate or rates are taken.

#### **Private and Public Investment**

Private and Public Investment consists of total outlays for construction and for the acquisition of producers' machinery and equipment by Canadian business, institutions and governments, together with expenditures for housing. Capital expenditures include the cost of procuring, constructing and installing new durable plant and machinery, whether for replacement of worn or obsolete assets, or as net additions to existing assets. Repair expenditures represent the non-capitalized outlays made to maintain the operating efficiency of the existing stock of durable physical assets.

Retail Sales (Refer to Appendices 2 and 3 for additional information)

Retail sales are defined as the aggregate sales made through retail locations (outlets). Retail sales estimates do not include any form of direct selling which bypasses the retail store, for example: direct door to door selling; sales made through automatic vending machines; sales of newpapers or magazines sold directly by printers or publishers; and sales made by book and record clubs. Retail sales exclude: retail sales through ancillary units, for example, warehouses, head offices, etc.; sales of contractors whose major activity is not retailing; and retail transactions between individuals.

#### Seasonal Adjustment

Fluctuations in economic time series are caused by seasonal, cyclical and irregular movements. A seasonally-adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as climate, crop cycles, holidays and vacation periods, grain receipts in Western Canada, deficiency payments made by provincial governments and the agriculture stabilization board and provincial income stabilization payments.

#### **Taxation Statistics**

Taxation Statistics are based on individuals that have filed tax returns with Revenue Canada, Taxation. Allocation of income is on the basis of the taxfiler's address at the time of filing. These figures should not be used to arrive at a per capita personal income figure for the province or sub-provincial areas for the following reasons:

- 1. Some individuals (e.g. students) who have earned small amounts of income during a year may not file a return with Revenue Canada
- 2. Some taxfilers may not report all income received, i.e., understate their income
- 3. Imputed income is not included in taxation statistics, e.g., free room and board, clothing, etc. provided to employees.

# **Three-Month Moving Averages**

A three-month moving average is the sum of three consecutive monthly estimates ending with the current month divided by three.

To improve the usefulness of sub-provincial labour force data, the monthly estimates have been replaced by three-month moving averages. Sub-provincial estimates show greater variability in their month to month value than provincial data. Therefore, averaging these estimates shows more clearly the underlying movements of time series by reducing the effects of the irregular fluctuations. In addition to providing smoother time series, three-month moving average statistics will have lower sampling errors than the monthly survey data because of the increase in the number of observations upon which the estimate is based.

# Unemployed

The unemployed includes those persons who during the reference week:

- 1. were without work, had actively looked for work in the past four weeks (ending with reference week) and were available for work
- 2. had not actively looked for work in the past four weeks but had been on layoff for twenty-six weeks or less and were available for work
- 3. had not actively looked for work in the past four weeks but had a new job to start in four weeks or less from reference week, and were available for work.

## **Unemployment Rate**

The unemployment rate represents the number of unemployed persons as a percent of the labour force. The unemployment rate for a particular group (age, sex, marital status, etc.) is the unemployment in that group expressed as a percent of the labour force for that group.

#### Value of Construction Work Purchased

The Value of Construction Work Purchased consists of the total value of output of both the construction industry and construction labour forces in other industries. Also included are related construction costs which are accumulated during the creation of a structure. Examples include pre-construction planning and design, management, legal and real estate fees, interest during construction, etc.

## Value of Farm Capital

<u>Land and Buildings</u> - value of land and buildings is an estimate of the value of real estate used for agricultural purposes or the value of real estate used for agricultural production located on one acre or more and with gross sales greater than \$250.

<u>Implements and Machinery</u> - value reported at its market value, which is the value the machinery would have in its present condition in an auction sale.

# Value of Manufacturing Shipments

Value of manufacturing shipments is defined as the gross value of goods produced from its own materials by the reporting establishment, or for its account. Value is net of discounts, returns and allowances, sales tax, excise taxes and duties, returnable containers and common or contract carriers' charges for outward transportation (but not of own carriers' delivery expense). Shipment values in this publication are monthly projections of annual census of manufacturers' values based on returns from a stratified systematic sample of manufacturing establishments.

# Wells Drilled - Type Of

<u>Development</u> - developmental drilling takes place within a proven or established area of an oil reservoir to a depth known to be productive.

<u>Exploration</u> - exploratory drilling refers to locating oil fields or pools, or testing for new fields or pools, in areas that have not been designated as producing areas.

### APPENDIX 1

# Changes to Collection of Export Data by Statistics Canada

Statistics Canada, the United States Bureau of the Census and the Customs Agencies of Canada and the United States signed a Memorandum of Understanding to exchange import data. Starting with January, 1990 data, Statistics Canada will no longer publish statistics on exports to the United States based on Canadian export documents. Instead, it will rely on American imports from Canada as compiled by the United States Bureau of the Census. Likewise, the United States Bureau of the Census will also be replacing its exports to Canada statistics with Canadian imports from the United States data as compiled by Statistics Canada.

As a result of the data exchange, users of Canadian export data (on a Customs basis) will observe higher values for most of the commmodity categories concerning the United States. The changes are attributable to:

- 1. Improved coverage import documents are subject to more rigorous control than exports due to the management of tariffs and the enforcement of trade agreements.
- 2. Valuation of products exported to the United States on a F.O.B. (Free On Board) port of exit basis as compared to a F.O.B. place of lading basis prior to 1990. Thus Canadian exports to all countries will be on the same basis.
- 3. Inclusion of the U.S. Virgin Islands and Puerto Rico with Canadian/United States trade these territories were published as separate entities prior to 1990.

# **APPENDIX 2**

# Changes to the Retail Sales Survey Conducted by Statistics Canada

Past estimates of consumer spending resulted from a monthly survey designed and introduced in the early 1970's. In recent years the survey had come to underestimate by a significant margin the total value of sales. A new survey was developed and conducted in "parallel" to the old survey for the January, 1989 to December, 1989 period. Information obtained from the parallel survey was used to develop historical statistics for the new survey. These estimates from the new survey are available beginning with the January, 1981 reference period.

The major changes introduced with the new survey are:

- 1. The new survey relies on a new and up-to-date business register from which names and addresses of retail businesses are drawn. New procedures allow the register to be updated more promptly and accurately in terms of new companies, firms going out of business and companies making changes in the nature of their activities.
- 2. The new survey is based upon the 1980 version of the Standard Industrial Classification and the 1986 version of the Standard Geographical Classification. Previously, three different codes were used: 1960, 1970 and 1980. Retail trade is the first series to use the new business register. Statistics Canada plans to eventually use the new register for all business surveys (e.g. the employment, earnings and hours survey). Increased efficiency in updating the register as well as consistent classification of components should lead to better data quality within series and improved comparability with other surveys.
- 3. Estimates are produced for 16 (a reduction from 28 in the old survey) trade groups for Canada, the provinces and territories. Currently, quarterly sales by trade group are available for the provinces and territories beginning with the 1st Quarter, 1989 reference period. Both monthly and quarterly historical sales by trade group are available for Canada.

#### **APPENDIX 3**

# The Goods and Services Tax (GST)

As of January 1, 1991, the GST, a 7% consumption tax, replaced the 13.5% Federal Sales Tax (FST), which was buried at the manufacturer's level. The FST was applied before transportation, wholesale and retail costs were added to a commodity. For consumers, the GST is similar to a broadly based retail tax charged on almost all goods and for the first time, most services. Goods exempt from the GST include: basic groceries, prescription drugs, medical aids and appliances, residential rents, and sales of previously owned homes. Exempt services include: municipal transit services, health and dental care, daycare, legal aid, and insurance policies, loans, mortgages, and securities.

### **Retail Sales**

Retail sales data as of January, 1991 exclude the GST, while figures prior to 1991 included the FST. Consequently, data for reference periods beginning January, 1991 are not strictly comparable to those previous to January, 1991. For comparable data, Statistics Canada has estimates available of the amount of FST included in 1990 sales data at the Canada level only. The reliability of the estimates do not allow adjustments to be made at the provincial level or for trade groups.

#### Consumer Price Index (CPI)

The prices used to calculate the CPI include all indirect taxes. Therefore, starting with January, 1991 data, prices include the GST.

## New Housing Price Index (NHPI)

The FST has been eliminated on the construction of new homes and replaced with the GST and a supplementary rebate program for new buyers. Existing houses for resale are not subject to GST since building materials have already been taxed under the old FST. As of January, 1991, the New Housing Price Index (based on contractor's selling prices) excludes the GST paid by the final purchaser. For comparison purposes, Statistics Canada has developed an analytical version of the NHPI calculated from the same price survey, incorporating estimates of the amount of tax paid and rebates permitted.

#### **New Motor Vehicle Sales**

The 13.5% manufacturer's tax on the production of new automobiles has been removed and replaced by the 7% GST. The GST is applied to the sale of new and used automobiles by motor vehicle dealerships; the GST is not applied to the private sale of used vehicles. The value of new motor vehicle sales does not include the GST.
